

ABSTRACT

A molded container may include a unitary base. The base may include
5 projections designed to secure, support, position, and/or protect one or more objects held
in the molded container. The projections may be spaced to allow access to objects held
in the base. The projections may include ledges and/or lips. A molded container may
include a lid. An inner surface of the lid may have protrusions to hold objects in place in
the molded container. Closure portions of the lid may snap securely on the base. A lid
10 may be attached to a base or removable. A separate lid may include guides to facilitate
placement of the lid on the base. In an embodiment, a base of a molded container may fit
in the lid of the molded container. A lid and/or a base of a molded container may be
designed to allow stacking of two or more molded containers.
